

Devops SW Engineer - Home assignment

Create a terraform file that deploys Nginx to kubernetes, with the following conditions:

1. Nginx pods will:
 - a. Have a label "networkHeavy: true"
 - b. Not reside on the same node with other pods that are labeled with "networkHeavy: true"
2. Basic scaling policy in place:
 - a. Cpu scaling
 - b. Memory scaling

Extra information:

1. You are free to use anything that you find online, as long as all the conditions are met.
2. Kubernetes version: 1.23.
3. Terraform version is up to you, please use [.terraform-version](#) file to indicate which terraform version you chose
